

Alessandro Roic

Dublin, Ireland | [linkedin.com/in/alessandroroic](https://www.linkedin.com/in/alessandroroic)

Senior Front End Developer & Team Lead with 6+ years of experience architecting high-scale web applications and leading cross-functional teams. Specialized in React and TypeScript, micro frontends, build optimization, and legacy migrations for global banking and enterprise systems.

Professional Experience

IBM - Turbonomic

Front End Team Lead | May 2023 - Present | Dublin, Ireland (Previously Toronto, Canada)

- Lead sprint planning and daily execution for a 5-person engineering team, unblocking technical hurdles while collaborating with product, management, and design stakeholders to drive delivery.
- Drove a complex migration from AngularJS to React, resulting in a 35% improvement in user satisfaction and significantly streamlined maintainability for future scalability.
- Orchestrated the efforts of 2 different feature teams (totaling ~10 developers), resulting in the successful release of over 12 critical features and significant team productivity gains.
- Migrated the build system from Webpack to Vite, boosting HMR speeds by up to 90% and streamlining CI/CD pipelines to enhance developer productivity.
- Engineered a centralized RBAC service enforcing fine-grained authorization across 10+ user roles, eliminating unauthorized access risks across critical endpoints

Accenture

Front End Developer | February 2021 - January 2023 | Rome, Italy

- Led a 4-developer team in a site-wide optimization initiative, achieving a perfect 100/100 Lighthouse score across all key pages.
- Architected modular React micro frontends across 3 primary repositories, supporting a high-throughput banking platform processing 100M+ monthly transactions.
- Managed and deployed an Angular-based data management application for a bank's internal use, enhancing operators' ability to efficiently view and manage client data.
- Achieved near-total unit test coverage across core modules using Karma & Jasmine, drastically reducing regression bugs during deployments.

Jpanik

Full Stack Developer | October 2019 - February 2021 | Rome, Italy

- Delivered over 20 new features and enhancements across the full stack for a hospital management application, expanding the application's core capabilities.
- Integrated dynamic Chart.js visualizations, reducing the time healthcare professionals spent analyzing patient trends by 25% and supporting more data-driven clinical decisions.
- Developed RESTful APIs using Java and Spring Boot to create scalable and performant services.
- Migrated AngularJS components to Angular 8, using in-depth knowledge of both frameworks, significantly reducing code complexity.

Skills

- **Front End:** Javascript, HTML, CSS, Typescript, Angular, React, Vue, Sass, Node.js, Redux, Jest, Karma, Jasmine, NgRx, RxJs.
- **Back End:** Java, REST API, PostgreSQL, Spring Boot, Hibernate, MongoDB.
- **Tools & Methodologies:** Git, Jira, Gitlab, Github, Figma, Agile, Scrum.

Education

- **Bachelor of Computer Science** / Sapienza University of Rome (Sept. 2016 - April 2020)
- **AWS Certified Developer – Associate** (05 August 2022)

Projects

- Personal Website: responsive portfolio built with Vue 3 and automated CI/CD via GitHub Actions.
